1.The current account balance represents the difference between imports and exports of goods, services, and transfers. Mathematically it is represented by the following: Balance of Goods and Services + Balance of Income (income receipts net of income payments) + Unilateral Transfers = Current Account balance. For 2010, Current Account balance = (500,027) + 165,224 + (136,095) = (470,898).
